

OpenTRV
From Rads to (IoT Data) Riches

Cheap as chips can be
it must be IoT
(in a speech bubble,
something more
pithy?)

60% of typical UK home energy bill
and **carbon footprint***
is for space heating *10% of UK footprint, 8% of EU

which is
as much as **half wasted!**

£6bn Is needlessly paid to energy
companies in the UK annually

£100 per home is our target to fix it

UK houses extant
in 2050 **26.5m**

In passing we have created
an open, cheap, reliable, low-power

with radio, security,
and even energy harvesting
under development,
for fit-and-forget, cheap-as-chips!
